

# Introduction to Linux

Day2\_Linux.md

Recall

# Last Class topics

# What is Linux

- **Linux is a kernel.**

## WHAT is kernel?

- Kernel is a code/program that used to meet your Software and Hardware. And allocate some resources.

# History of Linux

- In **1969** a team led by computer scientists Ken Thompson and Dennis Ritchie created the first version of UNIX on a PDP-7 minicomputer, which was chosen mainly because of Thompson's familiarity with the system from his hobby work on it
- **BUT IT WASN'T CHEAP AND OPEN-SOURCE**
- Then Person called "LINUS TORVALDS" Created the Linux kernel. And posted it online to make it open-source.

## Cont...

- **Richard Stallman** announced the GNU project in 1983 and cofounded the Free Software Foundation in 1985.
- GNU is a free software replacement to the UNIX OS, But it was just software replacement not full os {Examples: Bash,tar,emacs...} .
- So GNU + LINUX will give the GNU/Linux OS.
- The GNU Linux project was started to create a Unix-like operating system created with source code that could be copied, modified, and redistributed

## Types of shells

- Based on their features there are many shells.
  - SH
  - BASH
  - ZSH
  - FISH
- > They differ in Colouring, Piping, command compilation, some kind of features.
  - TO IDENTIFY YOUR SHELL “echo \$SHELL”

sh

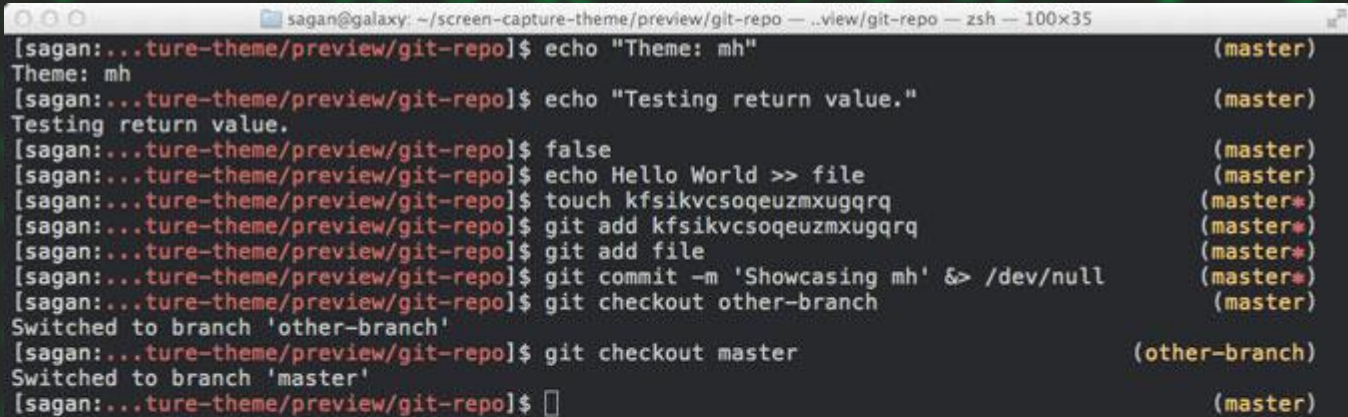

```
Terminal
-rwxr-xr-x 1 bin      18296 Jun  8  1979 fsck

# ZSH

A terminal window titled 'sagan@galaxy: ~/screen-capture-theme/preview/git-repo — ..view/git-repo — zsh — 100x35'. The terminal shows a series of commands and their outputs, with the current branch indicated in parentheses on the right side of each prompt. The commands include: 'echo "Theme: mh"', 'echo "Testing return value."', 'false', 'echo Hello World >> file', 'touch kfsikvcsoqeuzmxugrrq', 'git add kfsikvcsoqeuzmxugrrq', 'git add file', 'git commit -m "Showcasing mh" &> /dev/null', 'git checkout other-branch', 'git checkout master', and a final prompt.

```
sagan@galaxy: ~/screen-capture-theme/preview/git-repo — ..view/git-repo — zsh — 100x35
[sagan:...ture-theme/preview/git-repo]$ echo "Theme: mh" (master)
Theme: mh
[sagan:...ture-theme/preview/git-repo]$ echo "Testing return value." (master)
Testing return value.
[sagan:...ture-theme/preview/git-repo]$ false (master)
[sagan:...ture-theme/preview/git-repo]$ echo Hello World >> file (master)
[sagan:...ture-theme/preview/git-repo]$ touch kfsikvcsoqeuzmxugrrq (master*)
[sagan:...ture-theme/preview/git-repo]$ git add kfsikvcsoqeuzmxugrrq (master*)
[sagan:...ture-theme/preview/git-repo]$ git add file (master*)
[sagan:...ture-theme/preview/git-repo]$ git commit -m 'Showcasing mh' &> /dev/null (master*)
[sagan:...ture-theme/preview/git-repo]$ git checkout other-branch (master)
Switched to branch 'other-branch'
[sagan:...ture-theme/preview/git-repo]$ git checkout master (other-branch)
Switched to branch 'master'
[sagan:...ture-theme/preview/git-repo]$ (master)
```

## What is OS- Operating system??

- We have said UNIX and GNU/Linux as OS but what is OS. OS is “operating system”, which means the main software part of computer that helps to work on.
- It contains:
  - Kernel
  - Softwares
  - Desktop environment
  - File extensions
  - Window manager

# Kernel

# Desktop Environment

# Types of desktop environment on linux

## A) mate

# Types of desktop environment on linux

## B) gnome

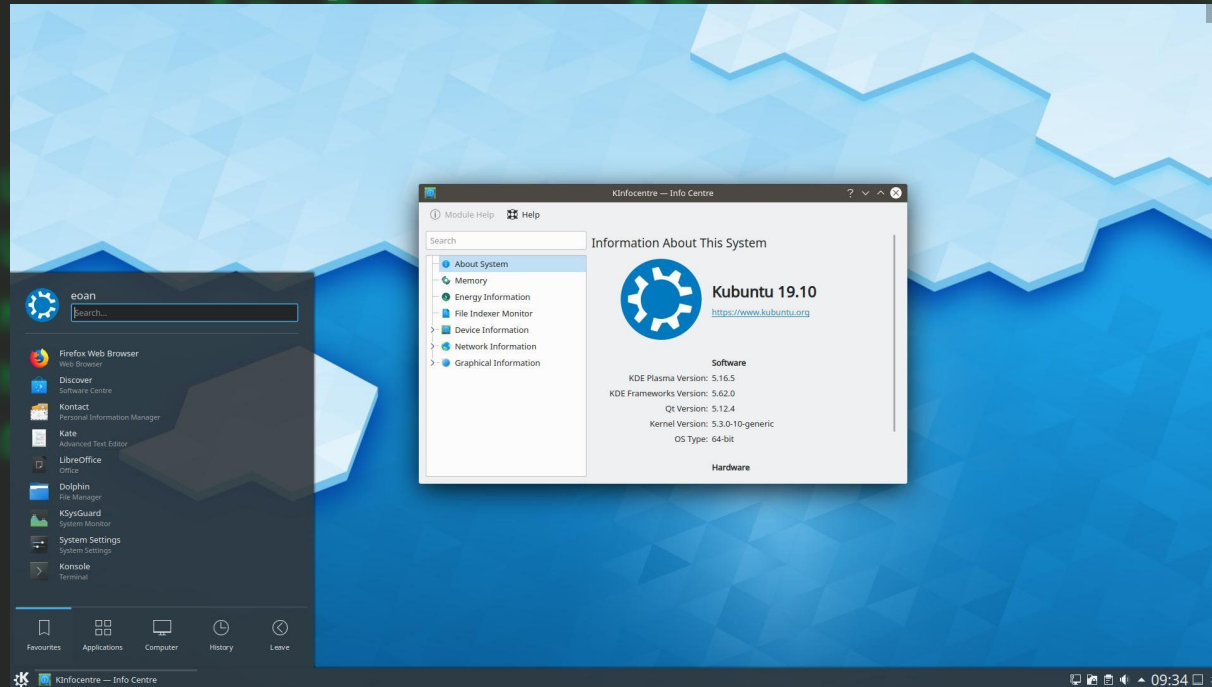

- Have beautiful animations, while opening,closing files

# Types of desktop environment on linux

## C) KDE plasma

# Types of desktop environment on linux

## D) Xfce

# Which Desktop environment is best?

>> Speed depends on:

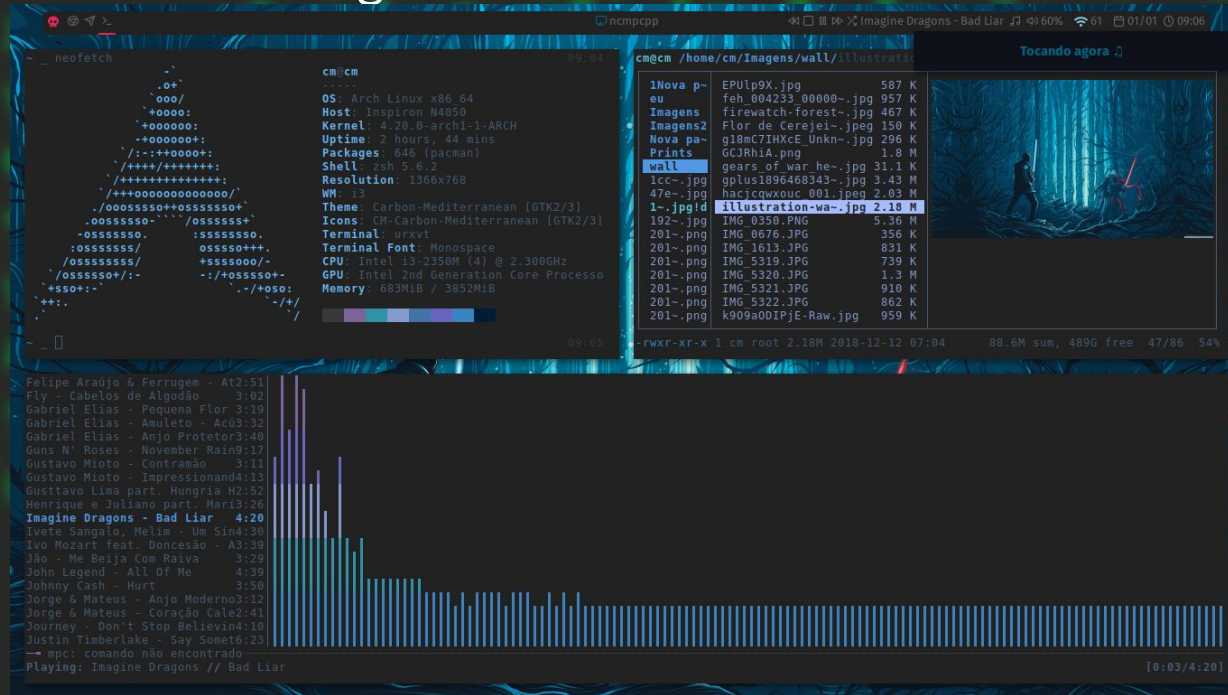

- Animations
- High Graphics
- Quality

>? Do You have slow pc...

# Window manager

## i3-window-manager

- 
- Organize your notes
  - Take a break(feta belu) and we will be back in 15 minutes.

**Break time**

# Why Linux?

- **FAST**

No high spec computer/device  
needed

# Why Linux?

## ● Most used

- 47% of professional developers use Linux-based operating systems.
- Linux powers 39.2% of websites whose operating system is known.
- Linux powers 85% of smartphones. (Hayden James)
- Linux, the third most popular desktop OS, has a market share of 2.09%.
- The Linux market size worldwide will reach \$15.64 billion by 2027.
- The world's top 500 fastest supercomputers all run on Linux.
- 96.3% of the top one million web servers are running Linux.
- Today, there are over 600 active Linux distros

# Why Linux?

- Most hacking tools

# Why Linux?

- Most Secured!

# Linux distributions/distro

- Distro is Modified Linux Kernels, type of operating systems with different:

- **LINUX KERNEL**
- **PACKAGES (GNU)**
- **PACKAGE MANAGER**
- **DESKTOP UI**

# So many distros...

- Debian
  - Kali linux
  - Ubuntu
  - Parrot
- Arch
  - Black arch
  - Garuda
- Fedora
- Red Hat
- Gentoo
- Android

Beginner-friendly			Intermediate			Hard mode		
								
	Ubuntu Based on Debian			Garuda Linux Based on Arch			Arch [Independent] – DIY	
	Pop!_OS Based on Ubuntu			EndeavourOS Based on Arch			Gentoo [Independent] – DIY	
	elementary OS Based on Ubuntu (LTS)			Manjaro Based on Arch			Slackware [Independent]	
	Mint Based on Ubuntu			MX Linux Based on Debian			Linux From Scratch [Independent] – DIY	
	Zorin Based on Ubuntu			Fedora Based on Red Hat			Qubes OS Based on Fedora – Security	
	Solus [Independent]			OpenSUSE [Independent]			NixOS [Independent] – DIY	

# Which is best for hackers?

- Kali linux
- Parrot Os
- Garuda
- Black Arch
- ...

# Kali linux

Kali Linux is a Debian-derived Linux distribution designed for digital forensics and penetration testing. It is maintained and funded by Offensive Security.

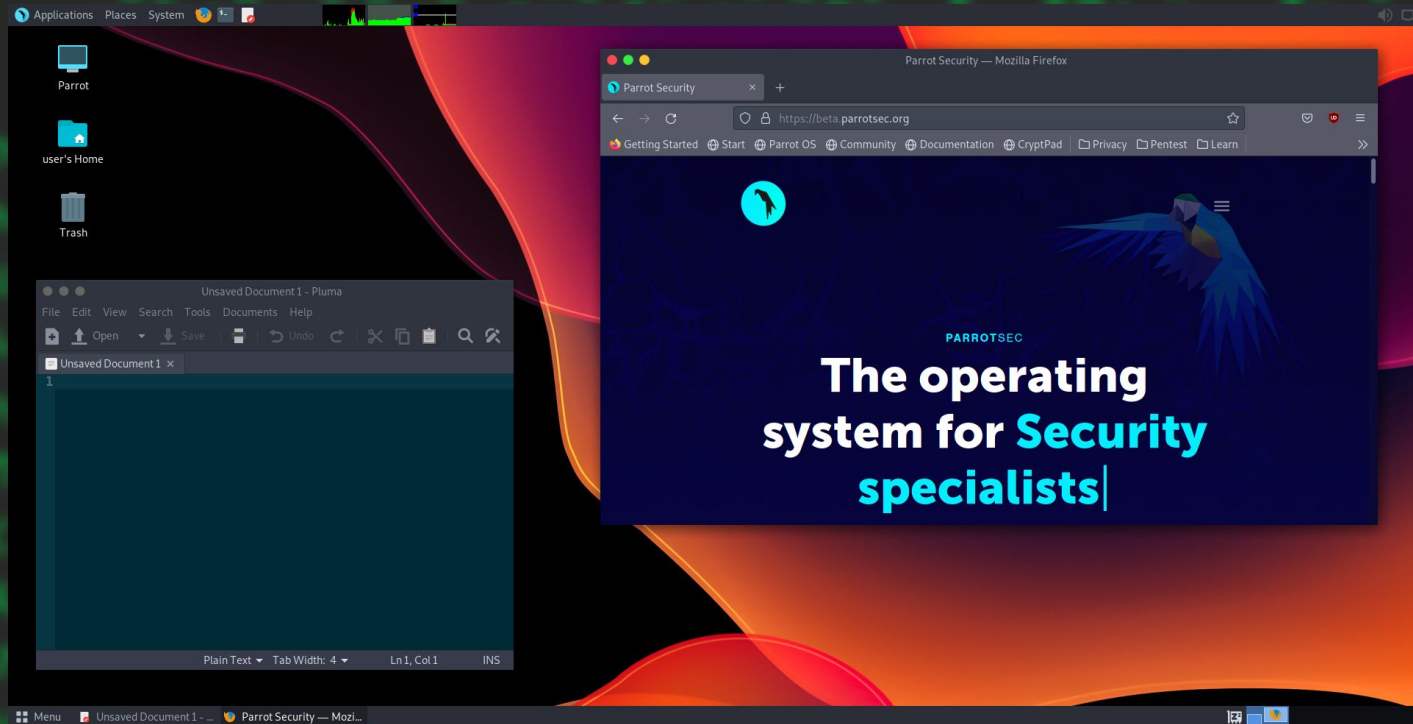

Desktop Env: xfce  
Package manager: apt  
Shell: zsh

# Parrot Os

Parrot OS is a Linux distribution based on Debian with a focus on security, privacy, and development.

- Desktop Env: mate
- Package manager: apt
- shell: bash

# Garuda

Garuda Linux is a Linux distribution based on the Arch Linux operating system.

- Desktop Env: KDE plasma
- Package Manager: pacman
- shell: fish

## Do windows have distros?

- Windows is not open-source so peoples won't use / edit it, so there won't be other kind.
- It just give updates and adds some feature on it.

## A) Main OS/ Main-boot

So... How can we use it?

## B) DualBoot / 2in1

So... How can we use it?

## C) Live boot

So... How can we use it?

## D) Cloud terminals

The screenshot displays a web browser window with the address bar showing <https://www.webminal.org>. The main content area is split into two panels. The left panel is a terminal window with the following text:

```
139-162-5-218 login: rexder
Password:
-sh-4.2$ uname -a
Linux 139-162-5-218 5.4.168-1.el7.elrepo.x86_64 #1 SMP Tue Dec 21 12:52:10 EST 2021 x86_64 x86_64 x86_64 GNU/Linux
-sh-4.2$
```

The right panel is a sidebar with a navigation menu at the top: Home, Play, Profile, FAQ, and Contact. Below the menu, there is a section titled "Want to use Webminal with other Linux websites?" followed by a "Community Chat" button. Further down, it says "Your terminal login id is: **rexder** Please do check your profile under 'Profile'. If that didn't help write to us via email". Below this is a dropdown menu labeled "Available Lessons: Select". At the bottom, it says "Just type 'vimtutor', if you want to learn about vim terminal. If you want to change colors, please visit 'play' menu and watch the screencast."

URL: <https://www.webminal.org>

So... How can we use it?

## E) Virtual Machine

# Cont...

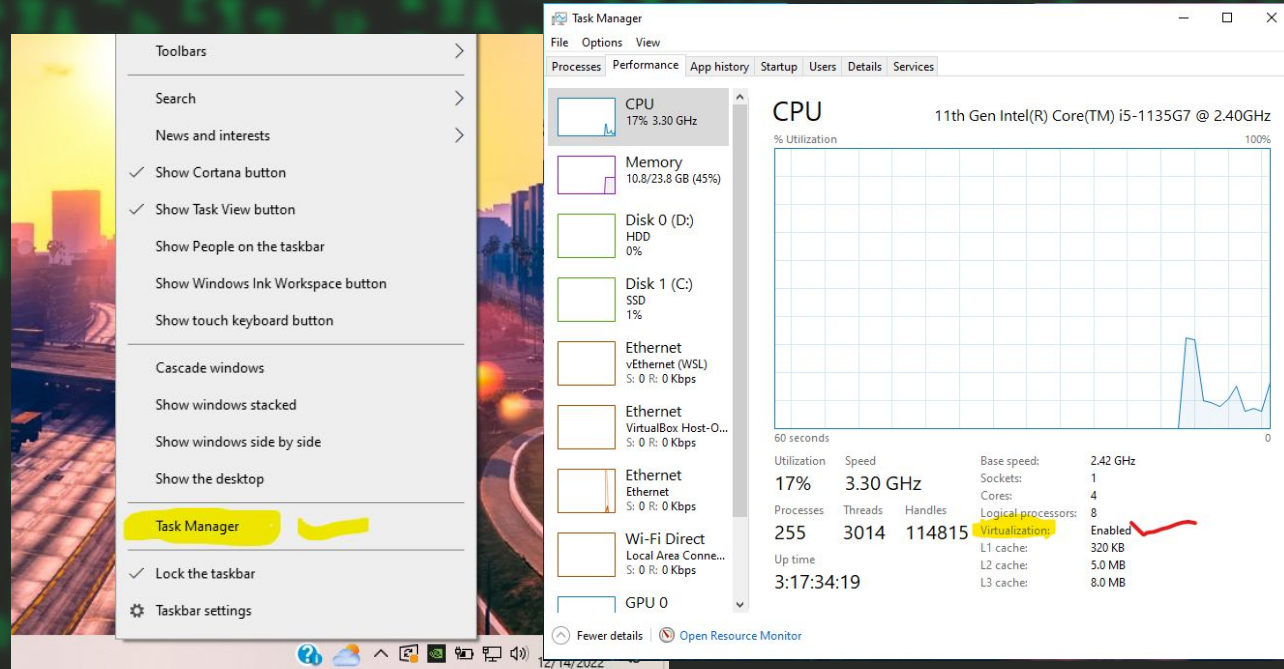

- Computers have a Technology called “**VIRTUALIZATION**”. This is the method how it allocate our using memory to the virtual machines/ VM’s
- This is a method to use windows and linux together.
- Softwares that gives you This ability:
  - HyperV
  - QEMU
  - Virtual Box - Oracle
  - VMware
  - ...

# You have to check some systems

1. Open task manager
2. Goto performance
3. Open CPU

- If it is disabled, you have to enable in BIOS settings(check youtube)
- If it is enabled we are good to go.

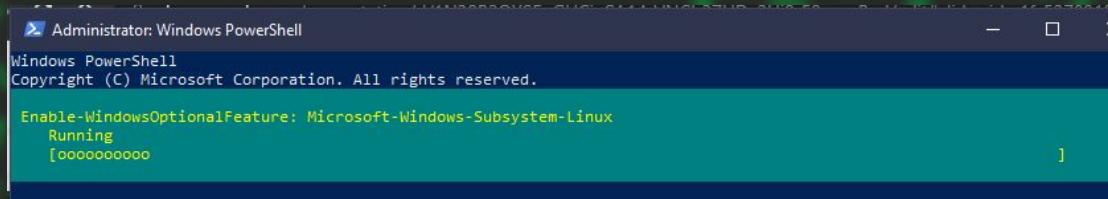

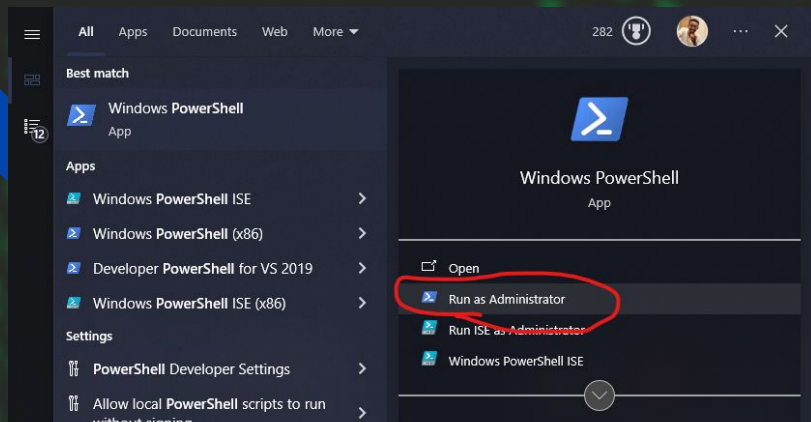

So... How can we use it?

## F) WSL v2 / Windows Subsystem for Linux

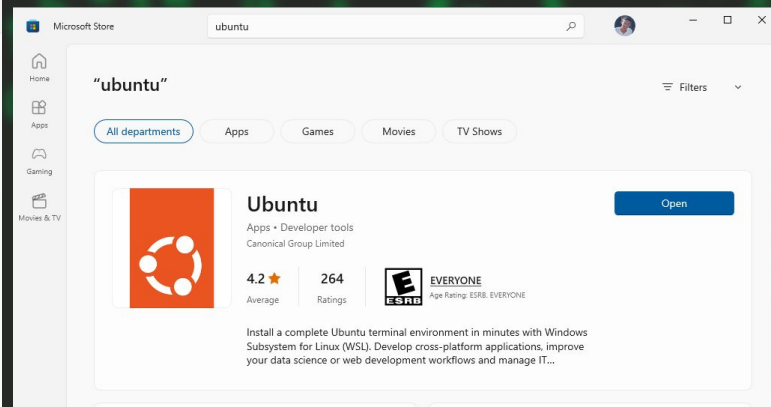

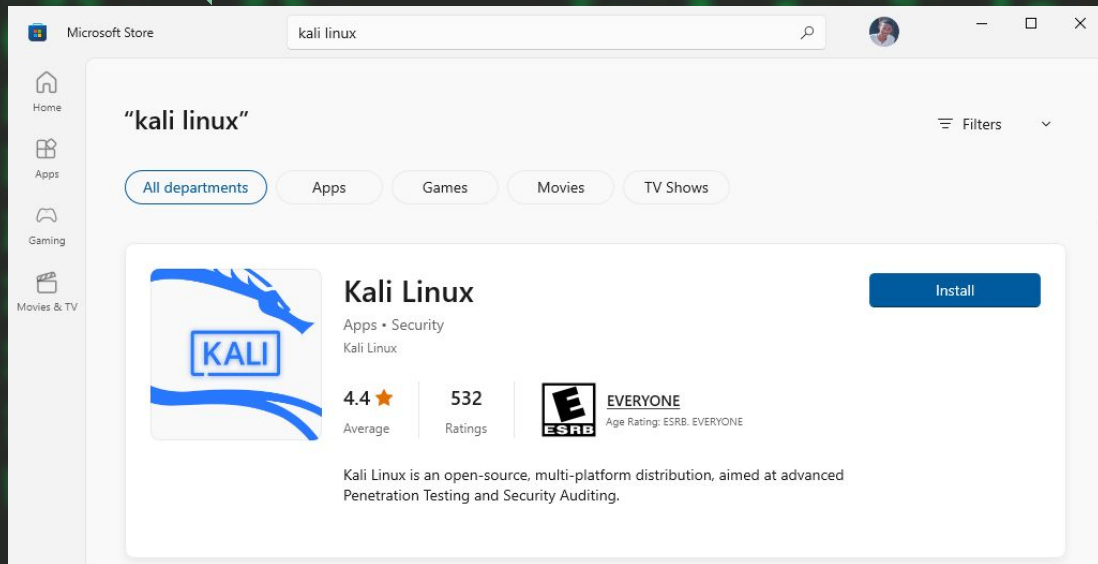

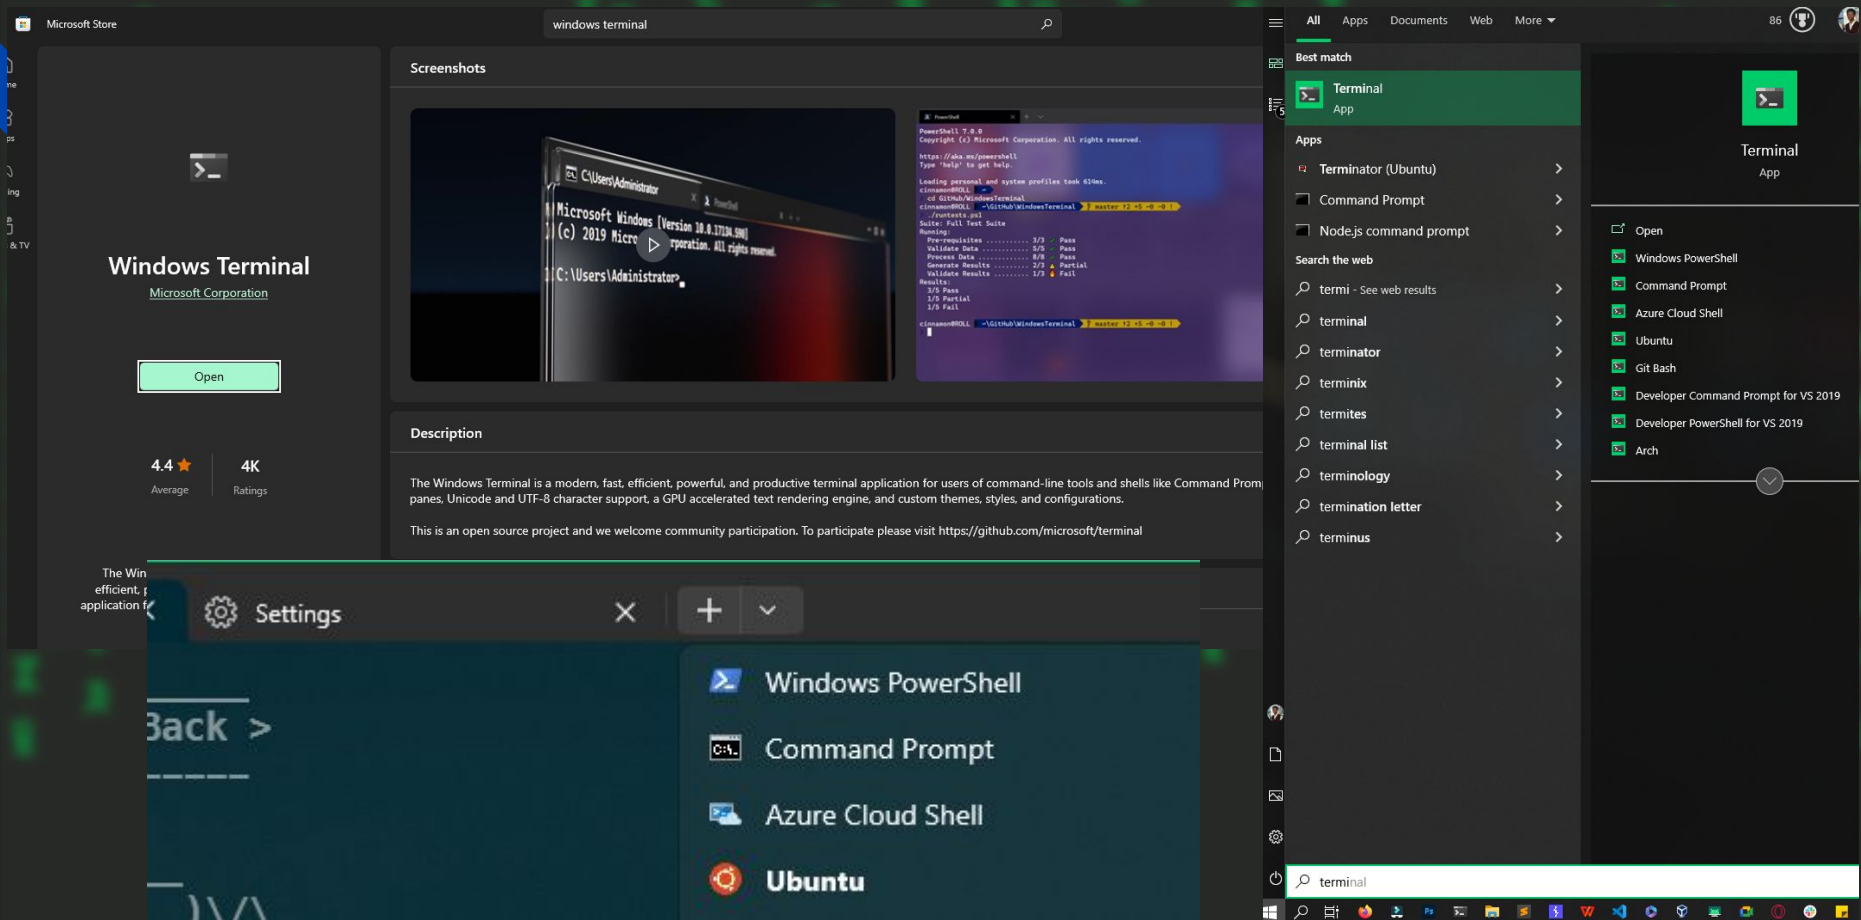

# Cont...

You can simply install them from Microsoft Store

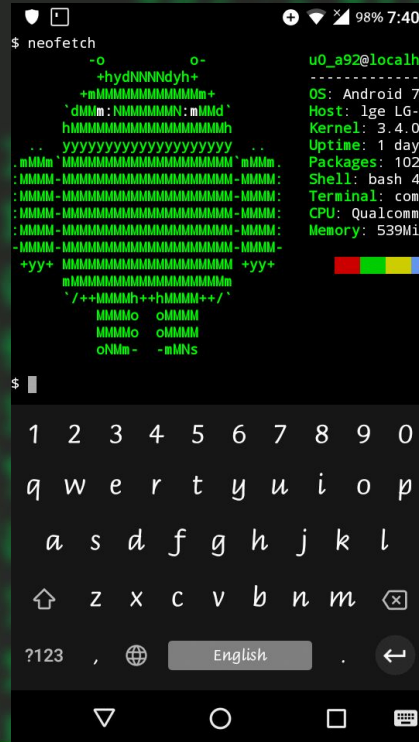

So... How can we use it?

## G) Termux - Android

```
$ neofetch
-o              o-
+hydNNNdyh+
+mMMMMMMMMMM+
`dMm:MMMMMM:mMd`
hMMMMMMMMMMMMMMh
.. yyyyyyyyyyyyyyy ..
.mMm .MMMMMMMMMMMMMMMMMMMM.mMm.
:MMM-MMMMMMMMMMMMMMMMMMMM-MMM-
:MMM-MMMMMMMMMMMMMMMMMMMM-MMM-
:MMM-MMMMMMMMMMMMMMMMMMMM-MMM-
:MMM-MMMMMMMMMMMMMMMMMMMM-MMM-
+yy+ .MMMMMMMMMMMMMMMMMMMM+yy+
mMMMMMMMMMMMMMMMMMMMM
`/++MMMMh++hMMMM++/'
  MMMMo  oMMMM
  MMMMo  oMMMM
  oNmm - -mMNs

u0_a92@localh
-----
OS: Android 7
Host: lge LG-
Kernel: 3.4.0
Uptime: 1 day
Packages: 102
Shell: bash 4
Terminal: com
CPU: Qualcomm
Memory: 539Mi
```

For running some codes  
And doing simple things!

## Assignment for next session

- Based on your computer Performance choose one method from the 6 methods (except termux) and setup it for next time.
- **Resource:** there are many youtube videos check them.

And just do this no need to do other thing

# **Class is Over**

## Question, Comment time
